

PERMITTING AND REGULATORY SERVICES

Waterline's in-house permitting and regulatory team brings **expert knowledge of local, provincial and federal regulations, ensuring compliance and reducing risks that can delay projects.** Our specialists proactively identify potential risks and recommend functional solutions, enhancing project outcomes and fostering environmental responsibility.

Services

Permitting Strategy Development

- Development of tailored strategies to identify and obtain the necessary permits based on project specifics and regulatory requirements.
- Regulatory Risk Assessments for upcoming projects allowing for better project planning and scheduling.

Environmental Impact Assessments

- Coordination and submission of Provincial and Federal assessments.
- In-house expertise in hydrogeology, soils and surface water.
- In-house GIS specialists deliver precise spatial analysis to identify risks early and streamline processes.
- Coordination with trusted subcontractors for specialty scopes.

Compliance Monitoring and Reporting

- Permit condition reviews.
- Management of requirements.

Permit Development and Support

- Federal.
- Provincial: British Columbia, Alberta, and Saskatchewan.
- Municipal.

Risk Assessment

Conducting assessments to identify potential risks associated with regulatory compliance and permitting.

Environmental Management Plans

Waterline provides end to end environmental management planning designed to keep projects compliant, efficient, and environmentally responsible. From major industrial builds to complex linear infrastructure, we develop clear, actionable Environmental Protection Plans, Construction Environmental Plans, Water Management Plans, and robust Erosion and Sediment Control measures.

Regulatory Research

Researching relevant regulations, policies, and guidelines to inform project planning and permitting.
